

Hi, we're Bike Citizens and we're looking for a full-time

## Android Developer

with the skills and motivation to transform great concepts and designs into advanced applications for the Android platform.

### Sounds like you? You're just one bike ride away:

We're a team of 20+ running an award winning company in great charming offices based in [Graz](#) and [Berlin](#). We started out creating the world's first navigation app focused on urban cycling and being fully offline capable. The next big thing was the "Finn" smartphone mount. There's much more to come...

Bike Citizens is an independent company and we make our own rules. For example we decided to work only [four days a week](#), that means weekends start on Thursday evening!

Being a small team means that we highly value flexibility, ambition and experience with the technologies we have in use.

- You will play a central role at the interface between ideas and reality
- You will be working along-side other engineers and developers working on different layers of the infrastructure as well as collaborating with our UI/UX designer
- You will design and build advanced applications for the Android platform
- You will be in charge of the applications' quality and performance, including reasonable handling of edge cases, usability, and general reliability

### Languages

**strong:** Java (Android framework), SQL

**basic:** C/C++

**bonus skills:** Python, Ruby on Rails

### Tools

**strong:** Android Studio, git, Eclipse / Atom

**bonus skills:** Jenkins CI, espresso tests, JUnit tests

If you share the idea of promoting urban cycling, please read on for the key aspects of your role...

You're an **ideal match** if you:

- Have proven software development experience with a focus on the Android platform
- Have proven working experience in Android app development and have published at least one original Android app
- Bring solid understanding of the full mobile development life cycle
- Have strong knowledge of Android UI design principles, patterns, and best practices
- Are able to write and work with feature specifications
- Are able to understand and collaborate on varied parts of the system architecture
- Are able to identify and fix bugs and bottlenecks (sustainably)
- Are able to manage the app release process
- Are able to understand business requirements and translate them into technical requirements
- Are used to working on Linux (or other Unix) systems
- Are a positive and proactive person
- Want to keep learning and share your know how

**Sounds like you? You are just one bike ride away.**

**Let's talk!**
