Peter Oberauer,
ATT advanced thermal technologies
GmbH

"The Partnership with the Green Tech Valley Cluster allows us to work with startups and established companies to advance our digital initiatives."

Wolfgang Leitner,
CEO ANDRITZ AG

Implement innovations

Grow internationally

Expanding your success

Our Goal is Your Lasting Business Success!

The Green Tech Valley Cluster is fertile ground for growth through green innovation. We listen to you carefully and offer you tailor-made services: The generation of ideas and innovation projects, the preparation of market opportunities and technology trends and the establishment of suitable contacts. Through your active engagement, e.g. by contributing topics, participating in events and by actively contacting us, we can put your services in the spotlight worldwide.

We look forward to working with you!

Welcome to the Green Tech Valley High Impact

In the Green Tech Valley Cluster, ~300 companies and research institutions work together on the green solutions of tomorrow. In this hotspot in the south of Austria, ideas mature 365 days a year into innovations in the fields of Climate Solutions and Circular Solutions.

The cluster stands for inspiration, competence, first-class (inter)national business contacts and diverse innovation support - this was confirmed only recently by the approximately 300 cluster partner companies, when asked about their free associations with the cluster. The track record speaks for itself: in the period 2015-2020, the cluster organization co-initiated 35 innovation projects, generated more than 1,200 ideas at companies and successfully established more than 1,300 targeted B2B contacts.

Green Innovations Grow Here

The work of the Cluster Management Organization follows the Triple "I": Implementing innovations, growing internationally and providing individual services for the business success of the cluster partner companies. By initiating joint technology projects or in formats such as the Green Tech Innovators Club, (free) space is created for new ideas that subsequently develop into green innovations and establish themselves on the national and international market. Your active contribution of topics and your concerns increases our joint impact.

Internationally Networked

The Green Tech Valley Cluster is part of the international network ICN (International Cleantech Network) and thus provides national and international environmental technology customers with access to the best available technologies. Styrian environmental technology companies benefit from global markets and first-class business contacts on all continents.

"This way, we are establishing the south of Austria as a Green Tech Valley and increasing its international visibility and appeal with this collaboration."

Gaby Schaunig,
Deputy Governor
Carinthia

"Environmental technology is a growth sector in Styria that we will continue to rely on in the coming years. In terms of sustainability for the next generations, it is important to me to push the expansion of green technologies."

Barbara Eibinger-Miedl,
State Councillor for Economy
Styria
